# Welcome to the 2012 Edition

This 10th edition of the Buyer's Guide is brought to you by Ebner Publishing International, publisher of *WatchTime*. It is the only watch price guide on the U.S. market with entries organized by price. This allows readers to easily peruse technical specifications and photos of hundreds of watches to find watches that fit their budgets. The price categories range from under $500 to over $50,000.

In addition to watch prices and specifications, the Buyer's Guide offers information on current watch trends. This edition contains reports on the growing popularity of slim, classic-looking designs ("Classical Revival") and of mechanical watches, especially complicated mechanical watches, for women ("Complicated Ladies").

It also contains a Pronunciation Guide to help with difficult watch brand names and watch terms. At the very end, there is a list of watch-company Web sites where you can find the names and addresses of retailers that carry the brands you're interested in.

To make future Buyer's Guide editions as useful as possible, we invite readers to e-mail their comments and suggestions to info@watchtime.com.

If you'd like to learn more about watches, take a look at our flagship publication, *WatchTime* magazine, available at many bookstores and newsstands. For a subscription, please call 888-289-0038 or send an e-mail to custsvc_watch@fulcoinc.com. You can also subscribe to the magazine on our Web site, www.watchtime.com.

# SEIKO

## DEDICATED TO PERFECTION

GRAND SEIKO. It started as a dream five decades ago. A dedicated team of SEIKO watchmakers set themselves a new challenge; to create a watch that would be more accurate, more reliable and more practical than any other luxury watch in the world. The result was Grand Seiko, a collection that is, simply, one of the best watches in the world. Today, the Grand Seiko tradition is celebrated in a mechanical watch with a 10-beat movement. Thanks to SEIKO's advanced MEMS[†1] technology and high-durability SPRON[†2] alloy, the new high-precision escapement delivers an accuracy of -3 to +5 seconds a day[†3] with a power reserve of 55 hours. What started as a dream has become a legend, proving the value of 130 years of dedication to perfection. grand-seiko.com

The watch industry reached something of a tipping point in 2008. Among the models that generated buzz at that year's Swiss watch fairs were DeWitt's WX-1 concept watch, a hulking timepiece that looked like a futuristic battleship and measured more than 72 mm long and almost 50 mm wide; Greubel Forsey's Fundamental Invention No. 2, the first wristwatch with not one, not two, but four tourbillons; Romain Jerome's Day & Night Tourbillon, a watch with no hours or minutes indication, which defiantly scoffed at the quaint notion that a wristwatch should tell the time; deGrisogono's Meccanico dG, with its mechanically operated digital time display; Hysek's enormous, multi-complication Colosso; and Concord's high-tech monolith, the C1 Gravity Tourbillon. It seemed as if the new rules in the watch world had been set: that bigger is better, that complicated trumps simple, that price is no object, that the ability to read the time on a watch takes a back seat to mind-blowing design and technological savoir-faire.

Since then, however, in the wake of the collapse of Lehman Brothers and the subsequent worldwide economic crisis, the winds have begun to shift, and the seeds of a contrarian counter-revolution of sorts have taken root.

Clockwise from top: Vacheron Constantin Historiques Ultra-fine 1968 (right) and Historiques Ultra-fine 1955; Piaget Altiplano 43-mm Anniversary Edition; Zenith Elite Ultra Thin; Omega JFK Commemorative Timepiece

The seeds started sprouting in some unlikely places. Zenith, which had in recent years pushed the big, pricey, avant-garde Defy watch as its leader model, devoted 2009 to reviving its El Primero Chronograph, a model introduced in 1969. Then, in 2010, its standout was the Elite Ultra Thin, a slim-cased, two-handed watch with a subtle small-seconds subdial at 9 o'clock; its restrained elegance was a 180-degree turn from the Defy collection's in-your-face boldness, and its price ($3,900 for the steel ver-sion) was very consumer-friendly for a watch with an in-house movement. Along with its usual slew of sporty Seamasters and Speedmasters, Omega released in 2009 a replica of the thin, rectangular, manual-wind watch worn by President John F. Kennedy in 1961 ($8,250), whose yellow-gold case measured only 25.39 x 31.5 mm. Girard-Perregaux, which in 2007 gave the world a $625,000 tourbillon watch with a miniature slot machine in it, started shifting its focus in 2009 and 2010 to new models in its elegant, vintage-look 1966 and 1945 lines, inspired by designs from their namesake years.

Vacheron Constantin went vintage and thin in 2010, introducing the Historiques Ultra-fine 1955 and Ultra-fine 1968 ($22,900 and $28,200, respectively), two slender, slightly updated models from its past. That same year, Piaget, renowned for its wafer-thin movements, created a brand-new one, 2.35-mm-thick automatic Caliber 1200P, for its Altiplano 43mm Anniversary Edition ($22,000); Frédérique Constant opted to go without its trademark "Heart Beat" aperture in favor of a subtle "piano guilloché" pattern on the dial of its Limited Edition F. Chopin ($1,445 steel, $1,595 gold); and Germany's Glashütte Original added models to its vintage-look Senator Sixties line.

In 2011, the classical revival showed no signs of abating. The Baselworld and SIHH watch fairs saw a plethora of watch brands introduce simple, classically designed, uncomplicated models, many of them in extra-thin cases or inspired by historic designs (many are both). Moreover, after years of pushing the envelope to 50 mm and beyond, most of them also sport more modest case dimensions. These are watches suited to a more austere time, an era of discreet taste following one of ostentatious wealth. (Of course, the rise of China as a luxury market, and the Chinese preference for thin, small-diameter cas-es and clean, uncomplicated dials also played a role.)

Germany's A. Lange & Söhne introduced the Saxonia Thin ($20,800), a two-hand watch with a new in-house manual-wind movement, Caliber L093.1. With its 5.9-mm-thick, 40-mm rose-gold case, it is the thinnest watch Lange has ever produced, and the movement is only 2.9 mm thick. Audemars Piguet, while still rolling out big, masculine Royal Oak Offshores for their legions of fans, also released the Jules Audemars Extra Thin. Having launched its Master Grande Ultra Thin in 2008, Jaeger-LeCoultre followed it up last year with the Grande Reverso Ultra Thin ($16,400 in rose gold, $8,000 in steel), the thinnest Reverso ever made, at just 7.2 mm. It contains hand-wound Caliber 822 and comes in a 46 x 27.5 mm case. Unlike many Reversos of recent years that boast multiple complications, this one tells only the hours and minutes. The Tonda 1950 from Parmigiani ($16,900 in rose gold, $18,900 in white gold) is almost as uncomplicated, adding only a seconds subdial to the two-hand time display. It is also only slightly thicker, at 7.8 mm, and is powered by the brand's new in-house movement, Caliber PF 701, only 2.6 mm thick.

Vacheron Constantin added another Historiques model, called the Aronde 1954 ($30,500). It has an Art Deco-inspired rectangular rose-gold case whose distinctive shape, in profile, looks like a bird in flight, hence its name, which is French for "swallow." IWC's Portofino Automatic ($4,200 in steel) not only evokes classical simplicity with its three-

## Terrasport I

Here at Mühle-Glashütte, we consider a very clear display to be one of the key requirements of a watch. Our new Terrasport I therefore fully avoids any superfluous embellishments, instead choosing to shine with its large luminous hands and very clearly delineated minute graduation in the style of a pilots' watch. These features enable the Terrasport I to perfectly serve its purpose: to measure time accurately and display it clearly. This is what we understand by "Elementary Time Measurement."

hand dial, simple indices and Roman numerals at 12 and 6; it's also available, for $1,000 more, on a steel-mesh "Milanese" bracelet, a style popular in the 1960s, when IWC's first Portofino was released. Hamilton also pays tribute to '60s style with its Thin-O-Matic, available in a 38-mm or 42-mm case with either a standard metal bracelet or a vintage-style flex bracelet or tapered leather strap. Prices range from $845 to $975. Last year's revamp of 180-year-old Baume & Mercier — with designs intended to evoke the easygoing luxury of seaside living — included an updated version of the Classima Executives ($1,700 to $4,700), its dressy businessmen's watch. The dial has traditional Roman numerals, thin indices and a subtle date window, and the beachcomber theme is evident in the "sundeck" pattern in the dial's center. Retro was the watchword in 2011 for Ralph Lauren, which augmented its round Slim Classique line of thin dress watches with its first square-cased model, the Slim Classique Square. It features the hand-wound RL430 movement made by (who else?) Piaget. The watch is not only slim; it is also very small for a modern men's timepiece, at only 27.5 x 27.5 mm. It comes in a rose-gold ($12,600) or white-gold case ($13,800; $15,200 with guilloché dial).

Even some brands better known for chronographs, complications and big, sporty cases got into the act. Breitling released its updated Transocean ($5,010), a traditional-looking piece that eschews the

tachymeters, slide rules and multiple subdials of many other popular Breitlings in favor of a clean, no-frills three-hand dial. This watch is also available with the steel-mesh "Air-Racer" bracelet for $5,495. Another aviation-themed brand, Bell & Ross, veered from the big, square-cased, instrument-panel style for which it is renowned to produce a simple round watch, the Vintage BR WW1 ($4,500). The dial design comes from cockpit dashboard clocks of vintage airplanes, the big fluted crown recalls those of pilots' pocketwatches, and the thin lugs are of a style popular in the 1920s. (Bell & Ross also released a pocketwatch version for the same price.) Blancpain's Fifty Fathoms divers' watch has been its most talked-about model in recent years, but its focus in 2011 was the elegant Villeret collection, including the Villeret Grande Décoration ($54,000), which sports a stark white, grand feu enamel dial; hand-painted enamel Roman numerals to mark the hours; and two gold hands that match the 45-mm gold case. This extremely limited model (only five will be produced this year, plus one unique piece for the Only Watch Auction in Monaco) saves its decorative flourishes for the movement plate, visible through a sapphire caseback, which boasts hand-engraved art depicting landmarks of various countries in which the watch is sold.

When watch aficionados think of Corum, they usually think of the nautical-themed Admiral's Cup models. However, the brand opted for classical simplicity with last year's Grand Précis, which is based on a model from 1957. A limited edition of 100 pieces in rose gold ($15,300) and 50 in white gold ($17,600), the watch has a champagne-colored dial with a "crosshairs" pattern, gold-coated applied indices and gold-coated dauphine hands. It is powered by the hand-wound Caliber CO162. The Historiador Pequeños Segundos from Cuervo y Sobrinos debuted in 2010. As with most of that brand's models, its design is inspired by vintage timepieces from the early 20th century. Last year's versions ($3,200 in steel; $10,950 in gold) added a modern touch of color, with an of-the-moment cobalt blue or anthracite dial.

Ball Watch commemorates its 120th anniversary with the Trainmaster One Hundred Twenty ($5,999), whose uncomplicated dial (available in silver or gray) is embellished with a sunburst pattern and the brand's trademark micro-gas tubes on the hands and indices for easy nighttime reading. Mühle Glashütte placed its first in-house manual-wind movement, Caliber MU 941, inside the new Teutonia III Handaufzug (German for "hand-wound"; $2,599), a timepiece inspired by historic Glashütte pocketwatches. It sports Arabic numerals, Breguet hands, a small date window at 3 o'clock and a classical coin-edge bezel. Carl F. Bucherer recently launched the Manero Autodate, whose diameter is a relatively modest 38 mm and whose understated dial features dauphine hands, gold-colored wedge-shaped indices, and a date window at 3 o'clock. Prices are $2,800, steel; $9,000, rose gold on a strap; and $22,700, rose gold on a bracelet. Finally, you know it's a trend when jewelry king Harry Winston, whose high-horology Opus models are always the talk of the Basel fair, chooses to also release an elegant, understated timepiece like the Midnight Automatic ($21,300), with traditional beveled hands and delicate baton-shaped hour markers.

As this sampling shows, while there will always be room — and we daresay, a demand — for watch companies to push the envelope with high complications, big cases, and wildly experimental materials and technology, there's a reason why the classics are the classics. ○

# Complicated Ladies

*Watch brands introduced a plethora of women's watches powered by mechanical movements in 2011, from simple three-hands to chronographs to a minute repeater.*

By Mark Bernardo

Patek Philippe Ladies First Split-Seconds Chronograph, Ref. 7059

Diamonds may still be a girl's best friend, but they are no longer the hottest girls' trend — at least in watches. While dazzling stones and shiny gold on the outside are still big draws for ladies' timepieces, both for the women who wear them and for the men who purchase them as gifts, more and more watch manufacturers are turning their attention to what's inside — that is to say, outfitting more models with Swiss-made mechanical movements, rather than the quartz movements that have become the go-to option for most ladies' watches.

The emergence of women's watches with mechanical movements has been happening slowly but inexorably over the past few years, due in part (as are most watch trends these days) to growing demand for such pieces in booming Asian markets. Recently, the pace has begun to quicken, as women and their watch-savvy significant others have begun to move away from the convenience of quartz toward the prestige, and horological cred, of mechanical.

At last year's Baselworld and SIHH watch fairs, many purveyors of luxury-mechanical watches — including some that had mostly approached their ladies' lines as afterthoughts and saved their *haute horlogerie* expertise for new men's models — unveiled new feminine watches that featured mechanical movements, even some rather complicated ones. (And yes, many of them still have plenty of diamonds. After all, it's never easy to leave behind one's best friend.)

The first sign that the ladies'-mechanical trend was no passing fancy was Patek Philippe's groundbreaking decision, in 2009, to introduce its long-awaited new manual-wind chronograph movement, Caliber CH 29-535 PS, not in a men's watch, as many expected, but in the decidedly feminine Ref. 7071R, nicknamed the Ladies First Chronograph. After all the buzz that launch generated, it should come as no surprise that the company was again at the forefront of the trend last year, when it introduced two new complicated ladies' timepieces. After a chronograph with a brand-new in-house movement, you may

Roger Dubuis Excalibur Lady

ask, what could the brand do for an encore? How about both a monopusher split-seconds chronograph and a minute repeater? The Ladies First Split-Seconds Chronograph, Ref. 7059R (U.S. price on request) contains what the company says is the world's thinnest column-wheel split-seconds chrono movement; the movement's name, CH R 27-525, refers to its dimensions, only 5.25 mm thick and 27.3 mm in diameter. The chronograph and split-seconds hands, along with the hour and minute hands, are center-mounted, while the subdials at 3 o'clock and 9 o'clock display the 60-minute counter and the running seconds, respectively. The watch has a 33.2-mm officer's-style rose-gold case with a diamond-set bezel and a display back; the poire hands and Breguet numerals are also in rose gold.

Caliber R 27 PS, the movement in the Ladies First Minute Repeater, Ref. 7000R (SF350,000; U.S. price on request) is also among the thinnest of its type, just 5.5 mm thick, and also one of the few repeater movements that are self-winding, in this case by means of a recessed gold microrotor. Like the split-seconds chrono, its exterior is elegantly simple, but its interior is decidedly complex, boasting a striking mechanism with two gongs (low-pitched for hours, high-pitched for minutes, and both for quarters), activated by a slide on the left side of the rose-gold case. One can only wonder what Patek has in store for the fair sex in the future.

Perhaps the biggest statement of a commitment to ladies' mechanicals came from Chopard, which introduced a brand-new in-house movement, Caliber 01.03-C, in its Imperiale Full Set collection. Created in Chopard's workshops in Fleurier, the movement is an automatic with a 60-hour power reserve. It powers a *haute joaillerie* watch with a 40-mm case in white or rose gold; both case and dial are fully set with either baguette-cut (in the white-gold model) or brilliant-cut (rose-gold model) diamonds. Prices start at $159,360.

The revamped Roger Dubuis portfolio now includes the Excalibur Lady, an extension of its Excalibur line of men's watches. The company proudly proclaims that the in-house movement in the Excalibur Lady, automatic RD821, meets the criteria both for the Geneva Seal and for COSC chronometer certification. The watch has a 36-mm case with a grooved bezel (set with 48 diamonds in some models), in white gold, rose gold or steel. The dial has the elongated Roman numerals that are a hallmark of the men's Excalibur. Prices start at $12,600.

DeWitt introduced a new ladies' line called Golden Afternoon, which gets its name from a line in Lewis Carroll's *Alice's*

DeWitt Golden Afternoon

*Adventures in Wonderland* and is inspired, according to the company, by Pre-Raphaelite art of women and nature. The watches' cases feature a modified version of the DeWitt "Imperial Columns" motif on the flanks. The dials have mother-of-pearl flowers of different sizes and colors flowing from the center across a mother-of-pearl "sky" background, and the hour and minute hands are designed to resemble angel wings. The movement is an ETA 2892. Prices range from $35,200 to $61,600.

Dior continued to chip away at its image as a fashion brand that makes almost exclusively quartz watches with the introduction of its Dior VIII collection. (The "VIII" signifies, among other things, founder Christian Dior's lucky number and the company's address in Paris, 8 Place Vendôme.) While the Dior VIII watches all have automatic movements, the most interesting of them are the Dior VIII Grand Bal models ($22,000-$36,500), which have an innovative horological twist as part of their design: the winding rotor is mounted on the dial and decorated with precious stones; the motion of the rotor brings to mind the elegant swaying of a ball gown.

Another fashion brand that has recently garnered watchmaking acclaim, Chanel, introduced its self-winding J12 Chromatic, which combines titanium and ceramic for a highly scratch-resistant sliver-gray case with a mirror-like diamond-polished finish. The 38-mm ladies' version ($6,300) has 54 diamonds on the bezel and eight diamond indices.

Omega's biggest news at Baselworld was the launch of its Ladymatic collection, which contains Omega Caliber 8520/8521, an in-house movement made specifically for ladies' watches. Like other Omega movements, it boasts a co-axial escapement and a silicon balance spring. The watch has a mother-of-pearl dial with, on the priciest models, single-cut diamond indices and a bezel pavé with 148 snow-set diamonds. There's also a sapphire caseback to view the movement. Prices range from $8,400 (steel, no diamonds) to $36,800 (gold, with diamonds).

Breguet, which claims a history of making complicated women's timekeepers that goes all the way back to Marie Antoinette, launched two new models last year: one sporty, the other dressy. The former is the Marine 8827 Ladies' Non Gem-Set Chronograph ($33,500) which was previously available only in diamond versions. Inside the watch's 34.6-mm case (in rose or

white gold) ticks Breguet Caliber 8827, which the brand calls the world's smallest self-winding chronograph movement. The watch has a natural mother-of-pearl dial with hand engraving done on a rose engine. Breguet's other offering is a new Reine de Naples 8918 model ($34,400), in a rose-gold case with 117 full-cut diamonds on the bezel and flange. The watch has an ovoid case with the crown at 4 o'clock. It is named after a watch made for Caroline Murat, Queen of Naples, by Abraham-Louis Breguet in the 18th century. Its automatic movement, Breguet Caliber 537/1, is visible through a sapphire caseback. A pear-shaped diamond sits at the 6 o'clock position on the silvered gold/mother-of-pearl dial.

Ulysse Nardin also offered up an "odd couple" of women's models this year. The sportier of these is the new Executive Lady ($17,000-$19,600), which, like its men's counterpart, the Executive Dual Time, includes Ulysse Nardin's patented quick-set second-time-zone display and big date. Powered by automatic caliber UN-24, the watch has a diamond-set bezel and mother-of-pearl dial; its 40-mm case is in stainless steel or gold. More lighthearted in its design is the Caprice Queen of Hearts (starting at $22,400), on which six hearts, alternating with small diamonds, serve as indices on the mother-of-pearl dial. The cushion-shaped, rose-gold case is also diamond-bedecked and has an exhibition caseback through which the owner can view automatic UN-13 and its gold, diamond-set rotor.

Hearts are also the theme of Frédérique Constant's Amour Heart Beat by ShuQi. On this watch's dial, the "O" in the word "Amour" is heart-shaped and serves as the aperture in which the watch's "heart beat" — that is, the pulsating balance of automatic Caliber FC-310 — is on display. There are three models, each limited to 888 pieces, in steel with diamonds, gold-plated with diamonds, and a gold-plated version without diamonds and with a "gourmet chocolate" dial. Prices range from $3,995 to $4,250.

Finally, if Frédérique Constant's heart beat aperture isn't enough to flaunt your lady's horological taste, there's Piaget's Altiplano Skeleton 34 mm ($75,000), with its hand-wound, diamond-set, skeletonized movement (Caliber 838D, based on Piaget's famous, ultra-thin *manufacture* Calibre 9P). The 34-mm rose-gold case is set with 357 diamonds and has a white alligator strap. ○

Within each category, the watches are listed alphabetically by brand name.

## THE WATCHES

Many of the watches shown are available in different case materials, with different dial colors and/or straps, with or without diamonds, etc. In most of these instances, just one example of the particular model is shown. The other renditions are listed in the watch description under the heading "Variations." If there is nothing listed under this heading this means the watch company did not list any variations in the information it provided us. Readers interested in obtaining the model in a version not listed should contact the watch company to find out if it is available.

The models shown here are meant to represent a broad sampling of watches on the U.S. market. *WatchTime* has tried to ensure that the watches shown are currently available. However, it is possible that a particular watch may not yet be on the market.

## THE BRANDS

*WatchTime* invited all major high-end brands with distribution in the United States to participate. To show the breadth of designs and functions available among quartz watches, we also asked a variety of quartz-watch brands to participate. With few exceptions, all the companies contacted submitted watches for inclusion in the guide.

## THE TECHNICAL SPECIFICATIONS

All information about the watches was supplied by the respective watch companies. When the abbreviation "N/A," for "not available," appears after a bold-faced heading, it means the watch company did not provide the information or it is not germane to the particular watch being described. For additional information on a particular watch it is recommended that you visit the brand's website.

## THE PRICES

Prices listed are suggested retail prices supplied by the manufacturers. They were accurate as of the guide's editorial deadline at the end of November 2011 but are subject to change.

## THE INDEX AND CONTACTS

An index of watch brands by page is provided for easy browsing, along with a listing of watch company contacts that a shopper can use to find the names of retailers in his or her area who sell a particular brand or model. The company contacts can also be found on our website, www.watchtime.com. Simply go to "Reference Center" and click on "Brand Contacts."

**WatchTime has made every effort, based on the material provided by the watch companies, to ensure the accuracy of the information presented in the Price Guide and is not liable for any errors or omissions.**

# Richard Mille

The RM 032 combines the practical features of timekeeping on land with a case that performs flawlessly in the exotic and harsh environmental conditions experienced by deep sea divers. To avoid any external pressure effect or accidental activation of the chronograph pushers while diving, Richard Mille developed a locking crown for the RM 032. The crown and pushers lock in place when the crown ring is rotated: green indicates an unlocked position, and red displays a locked position. This feature also protects the movement from damage due to excessive pressure or shocks to the crown. The RM 032's tripartite case is extremely difficult to manufacture: the process includes a one-and-a-half hour turning phase and 830 operations during a nine-hour milling phase. This innovative and extremely technical system is specific to the RM 032 and is patent pending.

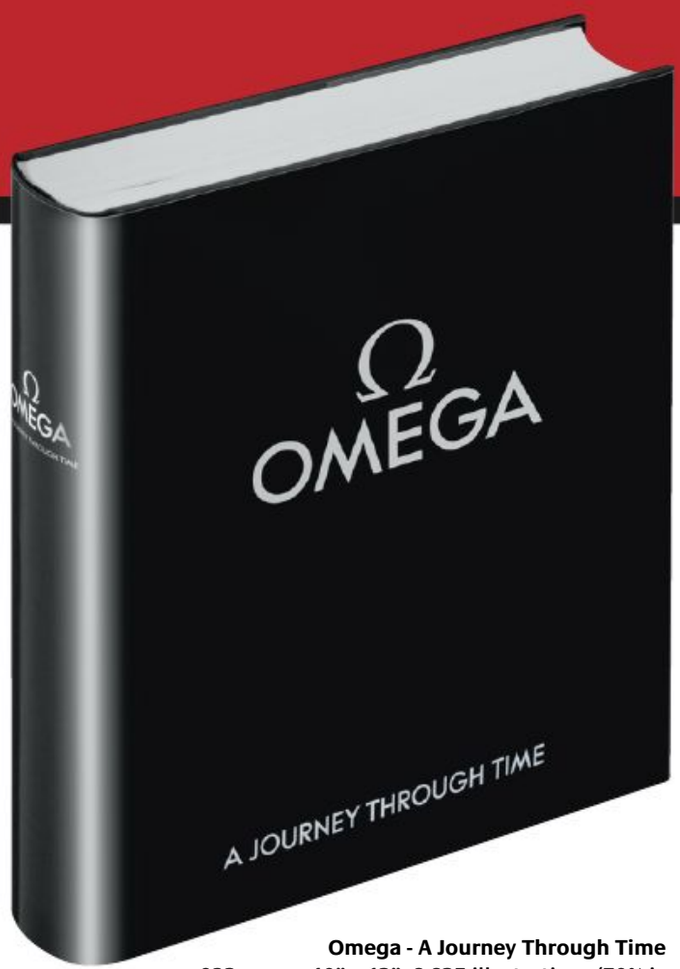
# Omega
## A Journey Through Time

At over 800 pages, with more than 6,600 illustrations, this is one of the most comprehensive works ever published about a watch brand. Devoted entirely to the evolution of Omega's watches, from the late 19th century to the present day, its pages come to life with reproductions of numerous watch advertisements that echo the color, feel and flavor of their time. The book is ideal for collectors, who will find info on all their favorite Omega models. Prefaced by Nicolas G. Hayek and written and designed by Marco Richon, curator of the Omega Museum, it is organized like a structured catalogue: divided into 12 chapters, preceded by a brief history of the company and followed by a complete list of calibers.



**Omega - A Journey Through Time**
**832 pages, 10" x 12", 6,625 illustrations (70% in full color and most never before published), cloth binding with a laminated dust jacket.**
**US $360 (incl. shipping + handling)**

Breguet
Depuis 1775
Breguet, the innovator.
Invention of the gong-spring, 1783
With the Classique "Grande Complication" 7637BB minute repeater wristwatch, hand-crafted in harmony with the finest traditions, Breguet reinvents the supreme horological complication. This stunning model features an entirely redesigned movement, patented innovations and a new position for the gong-spring. The spring-blade invented by Breguet in 1783 is struck by hammers to create an inimitably pure, crystal-clear chime. History is still being written ...
